Rush search request for 09/674237 Subject:

Please search in commercial database, issued patent files, PGPUB and interference:

SEQ ID NO:1, 2, and 3

Thank you.
MINH TAM DAVIS

ART UNIT 1642, ROOM 8A01, MB 8E12

305-2008

Voluntary Results Feedback Form
▶ I am an examiner in Workgroup: Example: 1610
> Relevant prior art found, search results used as follows:
☐ 102 rejection
☐ 103 rejection
☐ Cited as being of interest.
Helped examiner better understand the invention.
Helped examiner better understand the state of the art in their technology.
Types of relevant prior art found:
☐ Foreign Patent(s)
☐ Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
> Relevant prior art not found:
Results verified the lack of relevant prior art (helped determine patentability).
Results were not useful in determining patentability or understanding the invention

Arbones, M.L., Soriano, E., Estivill, X. and Pritchard, M.

Alu-splice cloning of human Intersectin (ITSN), a putative

multivalent binding protein expressed in proliferating and

differentiating neurons and overexpressed in Down syndrome

Eur. J. Hum. Genet. 7 (6), 704-712 (1999)

MEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology; cDNA library construction:
Institute of Medical Science, University of Tokyo, Laboratory of
Genome Structure, Human Genome Center; cDNA 5'- & 3'-end one pass
sequencing and clone selection: Helix Research Institute (supported
by Japan Key Technology Center etc.).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes mouse Esel. The present invention CC specifically describes mammalian Esel and 2 proteins (I) and their splice CC variants (Bse = BH-domain and SH3-domain regulator of endocytosis). (I) CC are involved in regulation of clathrin-mediated endocytosis (as a complex CC with Espl5 protein), vesicular trafficking and actin cytoskeleton. CC denerally (I) (or its (ant)agonists, mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); sequences antisense to the (I) CC polynucleotide; agents that downregulate expression of Ese genes or CC antagonists of an Ese binding partner are used to treat diseases CC associated with undesirable endocytosis and resulting changes in cellular CC function. Particularly overrexpression of Esel is used to block CC clathrin-mediated endocytosis in vivo or in cell cultures, while CC daministration of (I) is used to promote endocytosis of selected cells. CC (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be used to prevent CC unplex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal compounds can be treated include cancer;

New nucleic acid encoding Esel and 2 proteins, for treating cancer ę involved in regulation or preventing viral

Claim 6; Page 56-59; 99pp; English

ARESULT 2
ARESUL The present invention specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Ese = EH-domain and SH3-domain CC regulator of endocytosis). (I) are involved in regulation of clathrin-cc mediated endocytosis (as a complex with Espl5 protein) vesicular trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists CC mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); CC sequences antisense to the (I) polymucleotide; agents that downregulate cc expression of Ese genes or antagonists of an Ese binding partner are CC used to treat diseases associated with undesirable endocytosis and CC resulting changes in cellular function. Particularly overexpression of CC Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to promote endocytosis of CC selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal CC proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be cused to prevent viral infection. Endocytosis may also be regulated, in CC vivo or in cell cultures, by forming an Ese-Espl5 complex, then binding CC cancer; abnormal cell division or migration; viral infection; or abnormal CC receptor signalling, tissue development or synaptic transmission. The present sequence represents mouse Eseil CDNA sequence.

mutants); (i) specific antibodies (Ab); sequences antisense to the (I) CC polynucleotide; agents that downregulate expression of Ese genes or CC antagonists of an Ese binding partner are used to treat diseases associated with undesirable endocytosis and resulting changes in cellular function. Particularly overexpression of Esel is used to block function. Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to promote endocytosis of selected cells. CC (Ant) agonists of (I) or Ab are used to suppress abnormal proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be used to prevent viral infection. Endocytosis may also be regulated, in vivo or in cell complex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal cell division or migration; viral infection; or abnormal cell division or signalling, tissue development or synaptic transmission.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 3723;

The present invention specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Ese = EH-domain and SH3-domain regulator of endocytosis). (I) are involved in regulation of clathrin-mediated endocytosis (as a complex with Espl5 protein), vesicular trafficking and actin cytoskeleton.

Generally (I) (or its (ant) agonists, mimetics, fragments and inactive denerally (I) (or its (ant) agonists, mimetics, fragments and inactive denerally (I) (or its (ant) agonists (Ab); sequences antisense to the (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 3723 BP; 1065 A; 941 C; 1025 G; 692

                                                                                                                                                                                                     CC The present invention specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Ese = EH-domain and SH3-domain CC regulator of endocycosis). (I) are involved in regulation of clathrin-cc mediated endocytosis (as a complex with Espl5 protein), vesicular cc trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, CC mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); esequences antisense to the (I) polynucleotide; agents that downregulate cc expression of Ese genes or antagonists of an Ese binding partner are cc used to treat diseases associated with undesirable endocytosis and cresulting changes in cellular function. Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to propress abnormal cc groliferation of cells that can be stimulated to promote endocytosis of cc selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal cc proliferation of cells that can be stimulated to proliferate by a growth cf actor receptor; and similar compounds (also inactive Ese mutants) can be cused to prevent viral infection. Endocytosis may also be regulated, in compounds (Ese compounds) complex, then binding conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal cc receptor signalling, tissue development or synaptic transmission. The presents mouse Esell coding sequence.
                                                                                    Query Match

           This is the nucleotide sequence of full-length cDNA (clone 21) corresponding to a novel human SH3 gene, termed the SH3DIA gene, that contributes to the development of platelets and the pathogenesis of leukaemias, both in general and in particular those involving the megakaryocytic lineage. The SH3DIA gene maps to the
